Wireless Goniometer

COMMANDER ECHO™

chiroform®
Your strong back partner…..

The wireless Goniometer is designed to help evaluate range of motion in both large extremity joints and small finger joints.

Small digit position

With extremity extensions

A breakthrough for range of motion (ROM) evaluation of the extremities, hands and feet, this incredibly efficient product streamlines both evaluation and documentation so you can achieve more productive treatment time. It is the most efficient choice when you need to evaluate range of motion for differential diagnosis, treatment planning, progress tracking, functional testing and impairment rating.

Advanced Features

❯ Gathers realtime numerical data

❯ Evaluates active and passive ROM

❯ Tests large extremity with arm extensions

❯ Two-way communication automatically verifies data integrity

❯ Diminutive size for accurate readings of small joints

❯ Wireless console is independent of the testing device allowing the tester to review data during active testing without influencing the patient's level of effort

*Console required to operate device. Console and device sold separately. Device shown with accessory attached.
